

Attendance Policy

Solstice Retail Pvt Ltd -- Internal HR Document (fictional company, for training/demo use only)

Attendance Tracking Method

Attendance is tracked using the company's biometric terminals at warehouse locations and the mobile attendance app for store and office staff. Every clock-in and clock-out is timestamped and stored for payroll processing.

How Attendance Is Calculated

Daily attendance is calculated as the total hours between clock-in and clock-out, minus the standard 60-minute lunch break, compared against the expected 8-hour shift. An employee is marked 'Present (Full Day)' if logged hours are 7.5 hours or more.

An employee is marked 'Present (Half Day)' if logged hours are between 4 and 7.5 hours, and 'Absent' if logged hours are below 4 hours with no approved leave on record.

Monthly attendance percentage is calculated as (days marked Present, including half days weighted at 0.5) divided by total working days in that month, multiplied by 100.

Late Arrival and Early Departure

Arriving more than 15 minutes after the shift start time is recorded as a late arrival. Three or more late arrivals in a calendar month trigger an automatic email notice to the employee and their manager.

Employees needing to leave early must inform their manager in advance; unapproved early departures are treated the same as late arrivals for policy purposes.
